Alerts details

⚠ API Sensitive Info(PII) accessible without authentication

Severity	**High**
Reported by module	/httpdata/api_sensitive_info_exposure.js

Description

The API exposes sensitive information (Personally Identifiable Information (PII)) due to a vulnerability in the authorization process. An unauthenticated attacker can gain access to the personal data.

Impact

Sensitive info exposure

Recommendation

Implement a robust authorization mechanism

References

API1:2019 Broken Object Level Authorization (https://owasp.org/API-Security/editions/2019/en/0xa1-broken-object-level-authorization/)
API3:2019 Excessive Data Exposure (https://owasp.org/API-Security/editions/2019/en/0xa3-excessive-data-exposure/)

⌃ ASP.NET Core Development Mode enabled

Severity	**Medium**
Reported by module	/httpdata/aspnet_dev_mode.js

Description

The web application is run in development mode. It should be avoided in the production environment and strictly configured in a development environment because it exposes sensitive information about the web application

Impact

Development Mode may disclose sensitive information in the event of a web application error. This information can be used to launch further attacks.

Recommendation

Disable the development mode

⌃ TLS/SSL Sweet32 attack

Severity	Medium
Reported by module	/Scripts/PerServer/SSL_Audit.script

Description

The Sweet32 attack is a SSL/TLS vulnerability that allows attackers to compromise HTTPS connections using 64-bit block ciphers.

Impact

An attacker may intercept HTTPS connections between vulnerable clients and servers.

Recommendation

Reconfigure the affected SSL/TLS server to disable support for obsolete 64-bit block ciphers.

References

⌃ TLS/SSL Weak Cipher Suites

Severity	**Medium**
Reported by module	/Scripts/PerServer/SSL_Audit.script

Description

The remote host supports TLS/SSL cipher suites with weak or insecure properties.

Impact

Recommendation

Reconfigure the affected application to avoid use of weak cipher suites.

⌃ Vulnerable JavaScript libraries

Severity	**Medium**

Reported by module	/Scripts/PerFile/Javascript_Libraries_Audit.script

Description

You are using one or more vulnerable JavaScript libraries. One or more vulnerabilities were reported for this version of the library. Consult Attack details and Web References for more information about the affected library and the vulnerabilities that were reported.

Impact

Consult References for more information.

Recommendation

Upgrade to the latest version.

Affected items

⌄ Cookies Not Marked as Secure

Severity	**Low**
Reported by module	/RPA/Cookie_Without_Secure.js

Description

One or more cookies does not have the Secure flag set. When a cookie is set with the Secure flag, it instructs the browser that the cookie can only be accessed over secure SSL/TLS channels. This is an important security protection for session cookies.

Impact

Cookies could be sent over unencrypted channels.

Recommendation

If possible, you should set the Secure flag for these cookies.

Affected items

⌄ Sensitive pages could be cached

Severity	**Low**

Reported by module	/RPA/Cacheable_Sensitive_Page.js

Description

One or more pages contain possible sensitive information (e.g. a password parameter) and could be potentially cached. Even in secure SSL channels sensitive data could be stored by intermediary proxies and SSL terminators. To prevent this, a Cache-Control header should be specified.

Impact

Possible sensitive information disclosure.

Recommendation

Prevent caching by adding "Cache Control: No-store" and "Pragma: no-cache" to the HTTP response header.

Affected items

Web Server

ⓘ Access-Control-Allow-Origin header with wildcard (*) value

Severity	Informational
Reported by module	/location/cors_origin_validation.js

Description

Cross-origin resource sharing (CORS) is a mechanism that allows restricted resources (e.g. fonts) on a web page to be requested from another domain outside the domain from which the resource originated. The Access-Control-Allow-Origin header indicates whether a resource can be shared based on the value of the Origin request header, "*", or "null" in the response.

If a website responds with Access-Control-Allow-Origin: * the requested resource allows sharing with every origin. Therefore, any website can make XHR (XMLHTTPRequest) requests to the site and access the responses.

Impact

Any website can make XHR requests to the site and access the responses.

Recommendation

Check whether Access-Control-Allow-Origin: * is appropriate for the resource/response.

ⓘ Content Security Policy Misconfiguration

Severity	Informational
Reported by module	/httpdata/content_security_policy.js

Description

Acunetix evaluated the scan target's Content Security Policies, checked for misconfigurations and potentially unintended side-effects of otherwise valid configurations, and offers the following suggestions on how to change existing policies for improved security and maximum compatibility.

Impact

Consult References for more information.

Recommendation

See alert details for available remediation advice.

References

ⓘ Generic Email Address Disclosure

Severity	Informational
Reported by module	/httpdata/text_search.js

Description

One or more email addresses have been found on this website. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

Impact

Email addresses posted on Web sites may attract spam.

Recommendation

Check references for details on how to solve this problem.

ⓘ HTTP Strict Transport Security (HSTS) Errors and Warnings

Severity	Informational
Reported by module	/httpdata/HSTS_not_implemented.js

Description

HTTP Strict Transport Security (HSTS) instructs a web browser to only connect to a web site using HTTPS. It was detected that your web application's HTTP Strict Transport Security (HSTS) implementation is not as strict as is typically advisable.

Impact

HSTS can be used to prevent and/or mitigate some types of man-in-the-middle (MitM) attacks

Recommendation

It is recommended to implement best practices of HTTP Strict Transport Security (HSTS) in your web application. Consult web references for more information.

ⓘ Outdated JavaScript libraries

Severity	Informational
Reported by module	/deepscan/javascript_library_audit_deepscan.js

Description

You are using an outdated version of one or more JavaScript libraries. A more recent version is available. Although your version was not found to be affected by any security vulnerabilities, it is recommended to keep libraries up to date.

Impact

Consult References for more information.

Recommendation

Upgrade to the latest version.

ⓘ Subresource Integrity (SRI) Not Implemented

Severity	Informational
Reported by module	/RPA/SRI_Not_Implemented.js

Description

Subresource Integrity (SRI) is a security feature that enables browsers to verify that third-party resources they fetch (for example, from a CDN) are delivered without unexpected manipulation. It works by allowing developers to provide a cryptographic hash that a fetched file must match.

Third-party resources (such as scripts and stylesheets) can be manipulated. An attacker that has access or has hacked the hosting CDN can manipulate or replace the files. SRI allows developers to specify a base64-encoded cryptographic hash of the resource to be loaded. The integrity attribute containing the hash is then added to the <script> HTML element tag. The integrity string consists of a base64-encoded hash, followed by a prefix that depends on the hash algorithm. This prefix can either be sha256, sha384 or sha512.

The script loaded from the external URL specified in the Details section doesn't implement Subresource Integrity (SRI). It's recommended to implement Subresource Integrity (SRI) for all the scripts loaded from external hosts.

Impact

An attacker that has access or has hacked the hosting CDN can manipulate or replace the files.

Recommendation

Use the SRI Hash Generator link (from the References section) to generate a <script> element that implements Subresource Integrity (SRI).

For example, you can use the following <script> element to tell a browser that before executing the https://example.com/example-framework.js script, the browser must first compare the script to the expected hash, and verify that there's a match.

```
<script src="https://example.com/example-framework.js"
        integrity="sha384-oqVuAfXRKap7fdgcCY5uykM6+R9GqQ8K/uxy9rx7HNQlGYl1kPzQho1wx4JwY8wC"
        crossorigin="anonymous"></script>
```

ⓘ Version Disclosure (IIS)

Severity	Informational
Reported by module	/Scripts/PerServer/ASP_NET_Error_Message.script

Description

The HTTP responses returned by this web application include a header named **Server**. The value of this header includes the version of Microsoft IIS server.

Impact

The HTTP header may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Microsoft IIS should be configured to remove unwanted HTTP response headers from the response. Consult web references for more information.
